

COAL Prep

102 Workshop

CPSA's successful workshops has been a popular way for coal preparation practitioners to receive additional training. COAL PREP 102 is a followup to our 101 workshop

COAL PREP 102

CPSA will hold this one day workshops (8am - 4pm) at:

Sweetwater event center, Evansville, Indiana, July 23, 2026

The workshops will be led by Dr. Rick Honaker from the University of Kentucky and earns 8 PDH's. Coal Prep 102 is more performance optimization and economics. This is designed for plant and mine management, engineers and technicians.

Registration can be done on our website listed below. A lunch and refreshments will be provided. Cost is \$250 for members and \$325 for non-members (which includes a 1 year membership). The workshop is limited to 50 attendees, so make sure to go online and reserve your seat.

The 102 workshop focuses on computational methods to analyze, assess and optimize the performance of process units, circuits and plants. Concepts of mass and volume balancing will be presented along with tools for performance assessment and optimization. Examples will include partition curve development and modeling. Optimization based on constant incremental quality and micro-pricing will be discussed and demonstrated with respect to performance and coal blending practices.

Participants are encouraged to bring a laptop computer to work through problems covered by the instructor.
